ABSTRACTED-PUB-NO: DE 29814017U

BASIC-ABSTRACT:

The stand to support a tree, and especially a Christmas tree, has a holder (2) with an additional horizontal section (4). All the holder sections (3-6) and the holder (2) are in one piece. The guide sleeve for the tree trunk and crank clamping screw is at the leading end of the horizontal section (4). The foot (6) of the holder (2) extends over the centre point of the stand ring radius (8). The upright member (3) of the holder (3) is at an angle of 135 deg. before its transit into the horizontal part (4) of the

holder (2).

ADVANTAGE - The structure gives a robust and durable holder to support a tree.
